Saber	Med.	35.5	Strong	6/6	Mod. Susc.	Susc.	Tolerant	Yellow

OAT VARIETY DESCRIPTIONS

Armor* - A stiff-strawed variety with excellent yield potential, exceeding Ogle, Porter and Noble by an average of 4%, 13%, and 19%, respectively, in Ohio tests. Armor is a midseason cultivar with medium height. It is resistant to BYDV but susceptible to crown rust. Released: Ohio, 1991.

Noble - Achieves good yield and good test weight. Stiff medium-short straw, moderate resistance to barley yellow dwarf and some oat rusts. Medium-early in maturity. Released : Indiana, 1973.

Ogle – Excellent yield, medium maturity, and has stiff straw. It is widely adaptable, shows excellent yield, and exhibits excellent resistance to the barley yellow dwarf virus. It is susceptible to most current races of rust and loose smut. Released: Illinois 1981.

Saber* - An early maturity high yielding oat variety. The test weight is very good, and is about 1” shorter than Armor/Ogle. Saber has light yellow kernels with kernel coloring similar to Ogle. Released: Illinois 2010

*U.S. Protected Variety - Must be sold as Certified Seed
